

CITY OF CORINTH

Traffic Threshold Worksheet

Threshold Worksheet

Per [Subsection 3.05.04.D](#) of the Unified Development Code, a Traffic Impact Analysis may be required at the time of Site Plan or Preliminary Plat submittal for site developments on an Arterial Street or Collector Street or in the case of a zoning change.

A Traffic Threshold Worksheet must be submitted as part of the application package for review by the City's Engineer. If the proposed development exceeds one or more of the three threshold criteria, a traffic study will be required to be submitted with the application. Please describe in detail your evaluation of each criteria listed below. Additional sheets may be attached if necessary.

Criteria #1: The development exceeds parking 100 spaces average per driveway.

Criteria #2: Any driveway or roadway in the development is projected to serve 1000 or more vehicles per day.*

Criteria #3: Any driveway in the development is projected to serve 100 ingress vehicles or more in the design hour.*

* Unless approved otherwise, trip generation rates should be based on the most recent edition of the Institute of Transportation Engineers (ITE) *Trip Generation Manual*.

I hereby certify that this project does not exceed any of the three threshold criteria shown above and therefore the development would not warrant a Traffic Study in accordance with Subsection 3.05.04.D Traffic Impact Analysis of the Unified Development Code of the City of Corinth.
